

JavaScript UI & DOM - project

“PaintShowPro”

Team name: “Cyrax”

Team members:

- Milko Venkov (*username: wnvko*)
- Kiril Asenov (*username: kicata_bg*)
- Todor Vyagov (*username: RANOPILE*)
- Yavor Krystev (*username: yavor*)
- Krum Bagashev (*username: skloser*)
- Gabriela Angelova (*username: kalbo_17*)

Project purpose:

PaintProShow represents our idea of a paint-like program that runs in the browser. We used a canvas for the main drawing layer and a SVG for the animation-like intro, which represents the opportunities of our application. We have a user-friendly

menu on the right side of the drawing layer. All well-known shapes are built-in and are accessible for everyone. You can just select a button with the name of the figure you want to create and start drawing. You can choose the color of the shape and the color and width of its stroke. All shapes are draggable, so you can move them wherever you want. When you want to restart your picture, you can just select the “Clear draw board” button and you’re ready to do it.

Having our application as a web page, you don’t need to download and install programs like Paint and Photoshop for drawing interesting pictures. It’s so user-friendly, that even children can work with it.

Enjoy it!
